

# Basic Git and Basic Python Programming

# Presentation Session

- Anyone who didn't present their application can present now.

# Git Basic

- Configure user name → `git config --global user.name "Your Name"`
- Configure user email → `git config --global user.email your.email@example.com`

# Git Basic

- Turn the directory into a Git repository → `git init`
- View the repository status → `git status`
- Stage a snapshot → `git add <file name>`
- Commit the snapshot → `git commit -m "committed message"`
- View log history → `git log --oneline`

# Basic Python

- Print command
- Variabel
- Data type in Python
- How to receive user input
